

Pipe Organ for Sale

St. Paul, Minnesota
Built in 1992, 12 ranks

This organ was designed for use as an independent division of a larger installation. Although the 3-manual console that plays the entire instrument is also available, these 12 ranks could successfully be paired with a new or vintage 2-manual console. The façade displays polished tin and copper pipes of the exposed 8' Principal. The rest of the pipework is under expression, enclosed in the handsome oak case. The built-in, 3/4 hp blower is included.
